

Multi Search

For Dynamics CRM 2013

Multi Search

- Multi Search enables you to perform one search that simultaneously looks across all of Dynamics CRM data or your own collection of record types (entities).
- The search results are presented in a single window and can be filtered and sorted as required.

The screenshot displays the Dynamics CRM Multi Search interface. The top section shows the search configuration for 'Products & Services'. The 'Entities and attributes' pane on the left lists various entities with their corresponding attributes. The 'Search columns' pane on the right shows the selected search criteria for 'Invoice Product', 'Opportunity Product', and 'Order Product'. The bottom section shows the search results for 'Products & Services' with a search term of 'P'. The results are displayed in a table with columns for ID, Product Name, Product Type, Current Cost, Currency, and Description. The table shows 31 records, with the first 3 records under 'Invoice Product' and the remaining 28 records under 'Product'.

Multi Search

- Multi Search enables you to perform one search that simultaneously looks across all of Dynamics CRM data or your own collection of record types (entities).
- Users can define their own personal searches while administrators can create global search definitions.
- Decide what fields to search against, how results should be displayed or simply use Quick Find setting already defined in your organization.
- This product is licensed per organization
